Yuefei Wu's Resume

BASIC INFORMATION

Name	Yuefei Wu(武乐飞)	Gender	Male
Date of birth	March 1993	Grade	3rd-year Ph.D. candidate
School	Xi'an Jiaotong University	Phone	(+86)18792591992
WeChat	wu92591992	Email	yuelfei.wu@gmail.com

RESEARCH INTERESTS

My main research interest lies in uncertainty quantification and its application to natural language processing, and the previous research mostly focuses on Named Entity Recognition (**3 accepted paper and 2 submited paper**), Sentiment Analysis under Uncertainty (**1 submited paper**). The ultimate goal of my research is to build safe, trusted, and reliable natural language processing systems.

Conducting independent scientific research is one of my abilities, but not limited to the formulation and implementation of ideas, as well as the ability to write academic papers. Meanwhile, I have clear ideas and plans for future research directions, and also be interested and enthusiastic about interesting new research directions. It is desirable for me to improve myself in brainstorming, discussing and meeting with you, and finally produce high-quality and influential work outcomes.

EDUCATION

Xi'an Jiaotong University — Xi'an, China
Ph.D. Candidate, Computer Science — Sept. 2020 – June 2024 (expected)
Advisor: Prof. Qinghua Zheng and Associate Prof. BinShi

GuiZhou University — Guiyang, China
Master of Engineering, Computer Science — Sept. 2017 – June 2020
Advisor: Prof. Yongbin Qin and Prof. Yanping Chen

Henan University of Engineering — Changsha, China
Bachelor of Engineering, Mining Engineering — Sept. 2013 – June 2017

PUBLICATIONS

Published:

- Yanping Chen, **Yuefei Wu**, Yongbin Qin, et.al. Recognizing nested named entity based on the neural network boundary assembling model. IEEE Intelligent Systems 35 (1), 74-81.
- Yanping Chen, **Lefei Wu**, Qinghua Zheng, et.al. A boundary regression model for nested named entity recognition. Cognitive Computation, 1-18.
- Yanping Chen, Junhui Yu, **Yuefei Wu**. et.al. Full-span Named Entity Recognition with Boundary Regression. Connection Science. Accepted.

In Progress :

- **Yuefei Wu**, Bin Shi, Jiarun Chen, el.al. Rethinking Sentiment Analysis under Uncertainty. The 39th Conference on Uncertainty in Artificial Intelligence(UAI-2023). Under Review
- Qinghua Zheng, **Yuefei Wu**, Guangtao Wang, et.al. Exploring Interactive and Contrastive Relations for Nested Named Entity Recognition. IEEE Transactions on Audio Speech and Language Processing. Under Review
- Zai Zhang, Bin Shi, **Yuefei Wu**, Haokun Zhang, et.al. A Contrastive Learning based Two-stage Chinese NER Method. The 32nd International Joint Conference on Artificial Intelligence (IJCAI-23) . Under Review

PROJECT EXPERIENCE

Research of Position Regression Mechanism for Nested Semantic Recognition Sep. 2022 –Dec. 2025

By analyzing the inherent structure and expression of semantics, this project reveals the regressive capability of semantics. It provides a pioneering research for position regression and gives new ideas and new methods for natural language processing

Interpretable Learning Model with Mesoscience and Empirical Application of Tax Evasion Detection Dec. 2021 - May 2023

Utilizing the tax evasion detection as an application carrier, this project aims for the research on the interpretable learning model of complex data system and its modeling method

HONORS & AWARDS

National Endeavor Fellowship, Freshmen Scholarship, First Class Academic Scholarship, Outstanding Graduates, Merit Graduates, Outstanding Graduate Cadres, etc.
